DETAILED ACTION

1. This Office Action is responsive to the U.S. Application Ser. No. 10/615,911 filed on July 10, 2003, claims **9** and **10** are pending in the application.

Examiner's amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The specification has been amended as follows:

Page 1, after "April 26, 2002", insert -- , **now U.S. Pat. No. 6,633,505, issued on Oct. 14, 2003, --.**

The examiner's amendment has been made in order to place the application in a condition for allowance.

Priority

3. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 10/132,405, filed on April 26, 2002.

Information Disclosure Statement

4. This office acknowledges receipt of the following items from the Applicant:
Information Disclosure Statements (IDS) filed July 10, 2003.
Information disclosed and listed on PTO 1449 was considered.

Examiner's Statement of Reasons for Allowance

5. Claims **9** and **10** are allowed.

Tomita (US 6,324,113) and Takemae et al. (US 6,215,714) disclose a semiconductor memory device similar to that of the present application, but fail to teach:

“a switching control circuit for outputting a switching control signal in the operation period after a start of the operation cycle only in a case where an operation mode discriminated by the mode discriminating circuit is different from an operation mode in the former operation cycle; and an address switching circuit for switching a connection to a decoding circuit at every output of the switching control signal, while one of an external address used in the data-input/output mode and a refresh address from a refresh address counter used in the refresh mode is always connected to the decoding circuit” as claimed in the independent claim **9**; or

“a switching control circuit for outputting a switching control signal in the operation period after a start of the operation cycle only in a case where the operation mode discriminated by the mode discriminating circuit is different from the operation mode in the former operation cycle; and a block decoding circuit in which when a memory cell array block to be accessed specified, either a first number of bits with respect to address decoded in the data-input/output mode or a second number of bits with respect to address decoded in the refresh mode, smaller than the first number of bits is always connected, and connection is switched at every output of the switching control signal alternately between the first number and the second number” as claimed in the independent claim **10**.
